

Software Architecture and Techniques

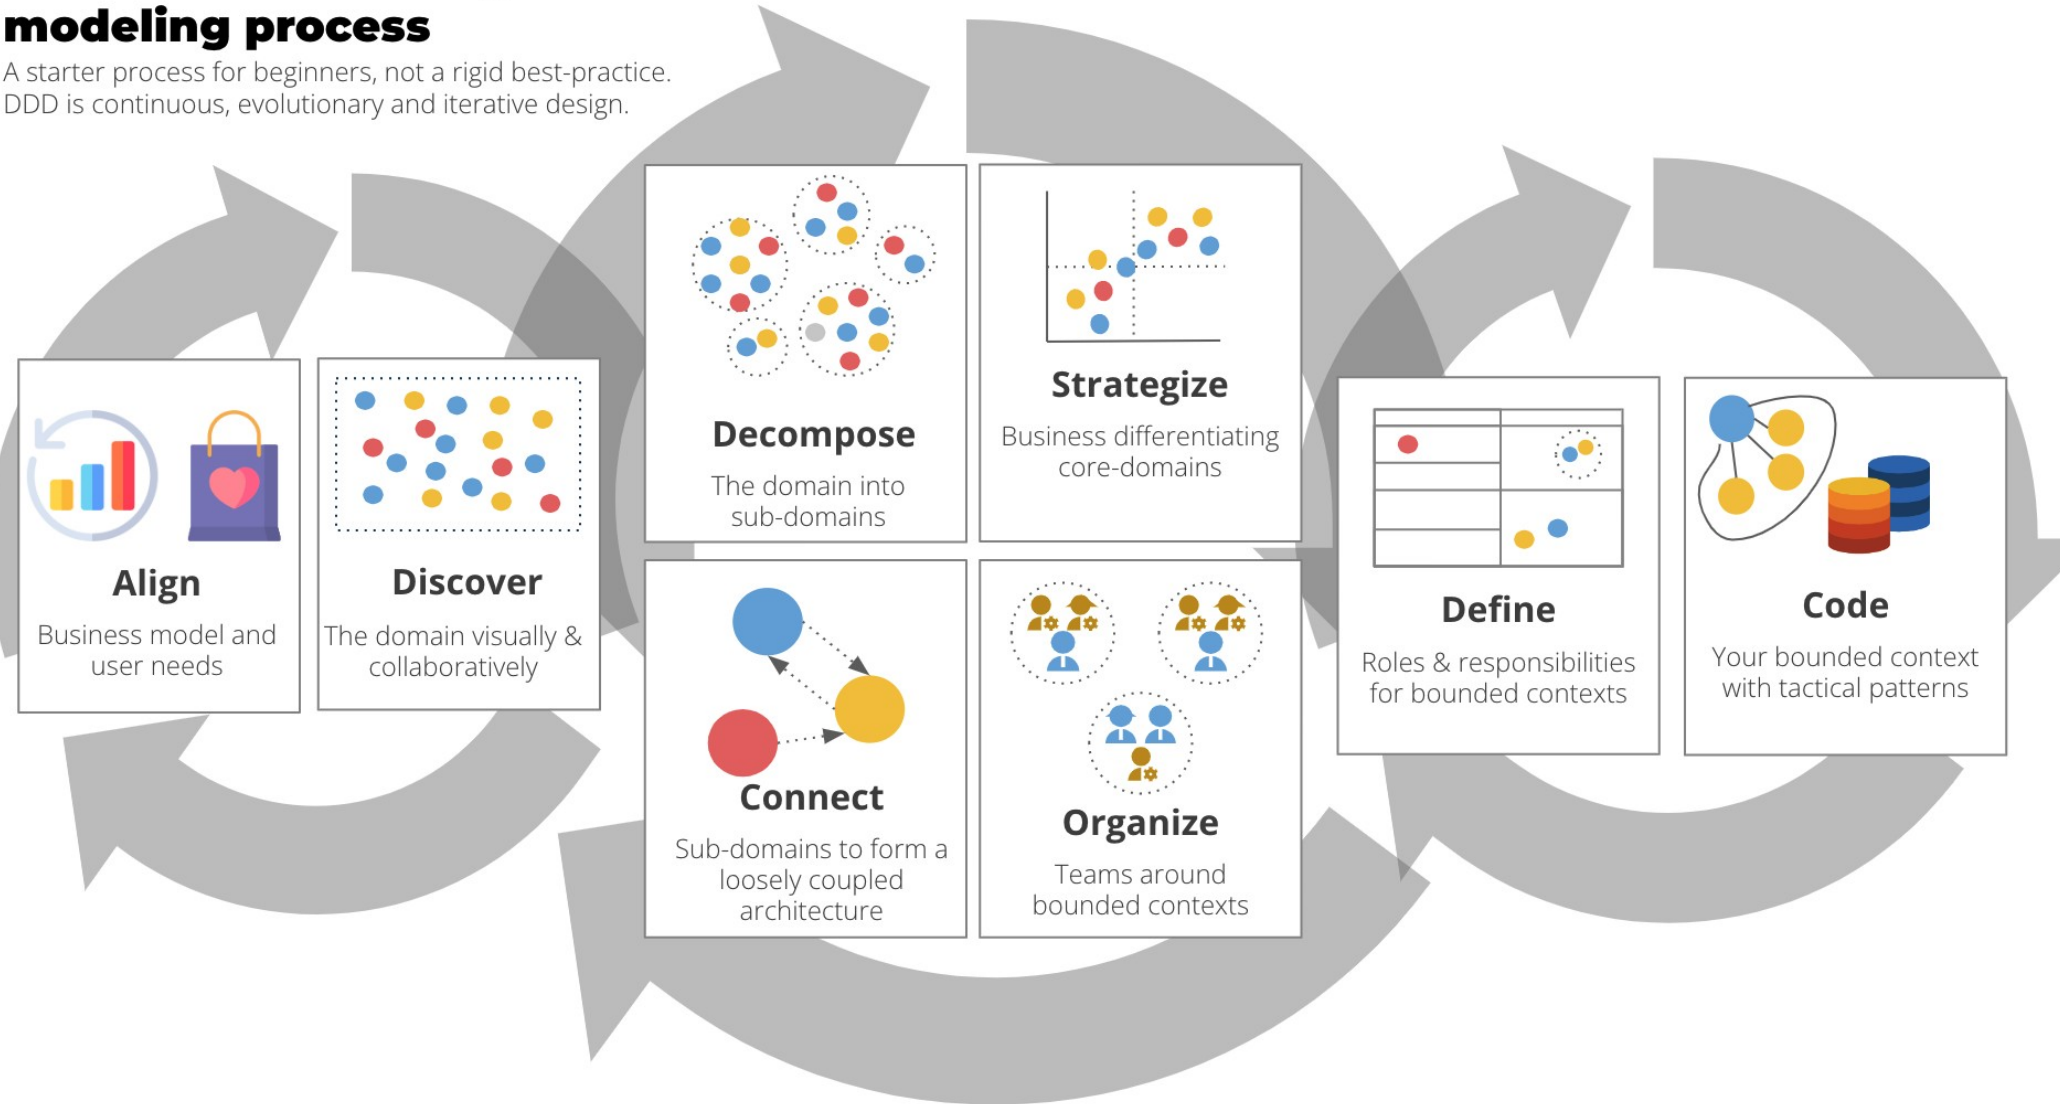

Domain Driven Design Workshop

Domain-Driven Design

Domain-Driven Design starter modeling process

A starter process for beginners, not a rigid best-practice.
DDD is continuous, evolutionary and iterative design.

Domain-Driven Design

Domain Driven Design On A Page

DDD is a philosophy for developing software systems that encourages Domain Thinking at each step of the Software Development Lifecycle

Domain Discovery

Exploratory DDD

- Model as-is, to-be, and could-be states of the domain
- Model collaboratively and visually so that the whole team* learns the domain and contributes to solution ideas
- Example: Big Picture EventStorming

Software Architecture

Strategic DDD

- Bounded Contexts: Split a large software system into specialised models aligned to areas of the domain
- Integrate bounded context using domain events**
- Identify strategically significant core domains

Software Design

Tactical DDD

- Create models in code which align to the team's shared understanding of the domain
- Use appropriate patterns in each context: entities aggregates, event sourcing, etc

* whole team: all roles involved in product development including business experts

** domain events: business-relevant happening communicated via (technical) events or commands
